1. **Default Static Flow**
   Create 3 <div>s and observe how they appear one after another. No position change.
2. **Relative Box Movement**
   Move a box 20px to the right and 10px down using position: relative.
3. **Fixed Header**
   Create a header that always stays at the top using position: fixed.
4. **Absolute Inside Relative**
   Place a badge inside a box using position: absolute in a relative parent.
5. **Sticky Section Title**
   Use position: sticky to keep a title fixed while scrolling.
6. **Rotate Box on Hover**
   Create a box that rotates 45° when hovered using transform: rotate(45deg).
7. **Scale Image**
   On hover, enlarge an image using transform: scale(1.2).
8. **Basic Transition**
   Apply a transition to a box so it smoothly changes color on hover.
9. **Slide Box with Translate**
   Use transform: translateX(50px) to move a box on click or hover.
10. **Fade In Box**
    Set a box's opacity to 0, and fade it in with opacity + transition.

---

1. **Modal with Fixed Overlay**
   Design a modal with a centered box and background overlay using position: fixed.
2. **Tooltip with Absolute + Transition**
   Build a button with a tooltip that fades in/out using transition and opacity.
3. **Sticky Sidebar**
   Sidebar stays visible on scroll using position: sticky; top: 20px.
4. **Animated Dropdown Menu**
   Use transform: scaleY() and transition to animate a dropdown.

5. **Hover-to-Skew Card**
   Create a card that skews slightly on hover using transform: skewX().
6. **Image Zoom and Shadow**
   Use transform: scale() and box-shadow to create a zoom effect.
7. **Rotating Icon**
   Build a circular icon that rotates on hover with transition: transform.
8. **Back to Top Button**
   Use position: fixed and visibility/opacity to hide/show a scroll button.
9. **Floating Label Form**
   Form input with labels that float above when focused using transform and transition.
10. **Gallery Grid with Hover Effect**
    Create a responsive gallery grid where each image slightly lifts on hover.

---

1. **Sticky Multi-Section Navbar**
   Build a section navigation menu that sticks and updates as you scroll (highlight section).
2. **Popup Card with Slide In Animation**
   Create a card that slides in from the side using translateX() and transition.
3. **Responsive Sticky Footer**
   Sticky footer that hides on scroll down and shows on scroll up (JS optional).
4. **Rotating Loader Animation**
   Make a loader using @keyframes + transform: rotate() with infinite animation.
5. **Flip Card on Hover**
   Create a card with front/back that flips using 3D transform and perspective.
6. **Collapsible Sidebar Menu**
   Sidebar slides in from left using transform: translateX(-100%) and transition.
7. **Glowing Button Animation**
   Create a glowing effect using box-shadow and transition.
8. **Product Card with Zoom + Info Slide Up**
   Hover zooms the product image and slides up extra info.

9. **Sticky Card + Floating CTA**
   One card sticks while scrolling, and a floating "Buy Now" button follows.
10. **Timeline Component**
    Create a vertical timeline with relative and absolute markers.

---

1. **Animated Navigation Indicator**
   Navigation bar with a moving underline using transform and transition.
2. **Full-Screen Menu Overlay**
   Create a hamburger menu that opens a fullscreen overlay using fixed + translateY().
3. **Carousel with TranslateX**
   Create a manual slider using transform: translateX() to slide between images.
4. **Sticky Image Reveal Section**
   Pin an image using position: sticky while changing text overlays.
5. **CSS Tooltip with Arrow**
   Tooltip created with ::after pseudo-element and rotated square for the arrow.
6. **Loader with Delay & Easing**
   Create a loader using transition delay and cubic-bezier easing.
7. **Text Reveal Animation**
   Animate text with clip-path or transform: scaleX(0) reveal effect.
8. **3D Tilt Card with Mouse Hover (JS optional)**
   Card tilts based on mouse position using transform: perspective().
9. **Overlay Zoom on Image Grid**
   Click a grid image to zoom it fullscreen using fixed + transform.
10. **Fixed Notification Panel with Auto Close**
    Design a top fixed alert bar that fades out using opacity + transition.

---

1. **Scroll-Triggered Animations**
   Create elements that animate on scroll using opacity, transform, and classes.
2. **Fully Responsive Dashboard with Sticky Header and Side Panels**

Build a real web app layout that adapts to all devices, uses fixed & sticky, animated toggles.

3. **CSS-Only Lightbox Effect**
Click image to zoom fullscreen using :target selector + fixed positioning.

4. **CSS-Only Accordion/FAQ Toggle**
Accordion without JS using checkbox hack and + selector.

5. **Advanced Multi-Step Form**
Each step is shown/hidden with transform and position: absolute slide effect.

6. **Rotating Testimonials Carousel**
Auto-rotating testimonials using @keyframes and translateX.

7. **3D Cube Animation**
Build a 3D cube using transform: rotateX/rotateY, perspective.

8. **Sticky Progress Bar**
Create a top progress bar that shows scroll completion using JS + width.

9. **Layered Parallax Scrolling UI**
Create layers that move at different speeds on scroll using translateY.

10. **Interactive Resume Template**
Clickable sections, sticky headers, fade-ins, fixed sidebar, all with pure HTML/CSS.
